Train weight: the train weight includes the weight of the driver (75 kg) and 10 litre of clean water, 90% fuel. The indicated train weights only take into account the equipment as standard upon leaving the factory. A difference of +/- 5% in the train weights is accepted under EU regulations. The manufacturer reserves the right to change this train weight. Certain heavy accessories, like large awnings or generators, may be commercially available. The weight of these accessories should be deducted from the payload and could possibly lead to a reduction in the actual passenger numbers the vehicle can carry. It is therefore important to ensure the maximum loads on the axles and the permitted gross vehicle weight are not exceeded when the vehicle is fully loaded. The vehicle was approved for road travel with a clean water tank capacity of 10 litre and must therefore be filled to comply with the regulations on the gross vehicle weight. The user is responsible for adapting the loads and the number of passengers based on the vehicle's loaded weight. To permit this, the clean water tank capacity can be adjusted by the user to avoid reducing the number of passengers.
